A Fresh Take on Mapping Environmental Hazards

Are you a construction worker breaking ground in unknown soil, or a parent, concerned about the toxic chemicals your children may be exposed to at school? Are you a homeowner, curious about the presence of buried health hazards in your neighborhood? Or an employee, interested to know whether you work in a former industrial area wrought with hidden pollutants?

There are nearly 1 million chemical spill sites in the United States, a figure roughly equivalent to the number of American schools and restaurants combined. Although it isn't true that all schools are located above spill sites, many are. Don't you want to know?

That's where WhatsDown, an application that maps buried environmental and health hazards, comes in. Inspired by Yelp™, WhatsDown is a platform designed to help you learn about and evaluate the state of the environment near your home, work, and school. Currently, the app maps over 500,000 toxic spills in the U.S. alone.

By clicking on a spill site, you will gain access to detailed information about the spill, its implications for human health, and the effort made to clean it up. You will have the option to share this information through social media sites such as Facebook™, Google+™, and NextDoor™, via email, or print a WhatsDown Beacon that can be posted and scanned using a smartphone. By spreading the word about toxic spills, you can facilitate faster cleanup and raise awareness about toxic threats to public health.

WhatsDown is currently in the beta phase of testing and development. As things stand, some of the data we use are old and/or incomplete; we intend to bring the database up to date as quickly as possible. Inspired by your questions and feedback, we hope to continue in the creation of a tool that can drive environmental protection. Bookmark WhatsDown to stay informed of our progress!

For more information about how to use the map and how to share information about toxic spills, click on the "How To" button below. To proceed directly to the map, click on "Go to the Map."

We welcome your questions and comments!

Using the Map

Sharing Places

Using WhatsDown is Easy

WhatsDown can help you find locations of buried environmental hazards, learn about the friends.

1. You can search for locations in different ways:
 - Type a city or a specific address into the search box,
 - Use your current location on your mobile phone or tablet,
 - Click a link a friend shared with you by email, FaceBook or Google+, or
 - Scan the code on the WhatsDown Beacon you found in the neighborhood.
2. Touch a map icon to make an information window appear;
3. Read about environmental hazard and potential health risks at that location;
4. Ask a question or give feedback;
5. Spread the word by sharing to Facebook, Google+ or by making your own WhatsDown Beacon to post in your neighborhood or workplace.
